The fastest and most  
powerful UV curing solution

App.  
300 mW/cm<sup>2</sup> UV LED

## THE COLAD FAST CURING SYSTEM

The process of UV curing (Ultraviolet Curing) is a photochemical process during which the operator uses ultraviolet light from a specially designed tool to instantly dry UV curing products (such as coatings, primers and adhesives).

The Colad Fast Curing System enables you to work faster and more efficiently while significantly reducing curing time between process steps. UV products can be dried fast and easily with the Colad Fast Curing System UV Curing Light. Curing times depend on layer thickness and exposure distance. UV light is able to cure layers with a thickness of up to 1 mm.

## 4 KEY PRODUCTS FOR SMART AND SPOT REPAIRS

**UV Curing Light**  
Art. no. 9000

Per piece in a storage case. Content: UV Curing Light, UV Safety Goggles, UV Putty Fine, Polyester Preparation Gloves, manual and warranty card.

**UV Putty Coarse**  
Art. no. 915020

190 g tube  
For filling small cracks, dents and stone chips

**UV Putty Fine**  
Art. no. 915011

220 g tube  
For filling even the smallest micro holes

**UV Putty Transparent**  
Art. no. 915033

For easy repair of even the smallest rock chips. Perfect for smart and spot repairs. 1-component putty Solvent- and Styrene-free
