

WINDOW RESTRICTOR HANDLE

According to RoSPA, around 4,000 injuries occur from falls from open windows each year, Cardea Solutions' Window Restrictor is the solution to accident prevention in schools, care homes and hospitals.

- In line with HSE guidelines, the Handle Window Restrictor should be fitted to an opening of 10cm in line with HSE Guidelines or 8.9cm in line with child-proof guidelines.
- The Handle Window Restrictor is designed to be fitted to the handle mechanism of the window to eliminate the risk of cracking glass when fitting.
- Anti-Tamper screws to prevent the restrictor from being easily compromised.
- The lock cannot be easily defeated by insertion of a blade (such as a screwdriver, think knife, scissors or similar).

APPLICATION

- Suitable for healthcare establishments, schools, nurseries and hotels - wherever there is a risk of accidental or intentional falls from high windows.

SPECIFICATION

- A cable length of 20cm.
- Stainless steel wire in a plastic coating.
- Fixing Plate made from zinc alloy.
- Supplied with anti-tamper screws which cannot be removed without the use of special tools.
