

DISKUS® INTEGRAL HASP DI142

KEEPING YOUR SLIDING DOORS CLOSED

Key Features

- Universal hasp with integrated Diskus® padlock
- Ideal for use on sliding doors and gates without rebates (e.g. on transporters and box waggons)
- Easy to operate with one hand due to handy frontal cylinder access
- Solid metal locking case prevents successful attacks on the integrated padlock
- Zinc-plated for extreme corrosion resistance
- Splash-proof cylinder
- Diskus® padlock can be exchanged
- Mounting hardware (screws, drilling template and spacers up to 5mm height) and Diskus® lock are included

The security rating of a hasp should always match the padlock. High-security hasps can be distinguished by different characteristics, for example concealed screws.

The combination of a Diskus® padlock and the universal hasp results in highest protection for sliding doors of your van.
