

REARSHIELD™

Although the risk of a finger-trapping accident occurring at the back of the door is considered minimal, in a childcare setting the probability of an accident still exists. Unfortunately, this has often proved to be the case.

- Following the success of the Fingershield device in preventing finger-trapping accidents, a new form of finger protection was developed in 2003 called the Rearshield.
- As a complementary door safety product to the Fingershield device, when combined you have a complete finger protection solution.
- Like the Fingershield device, Rearshields can be fitted to most door types including wood, metal and uPVC. It can also be installed to doors, which open to 180 degrees.

APPLICATION

- Rearshield devices are suitable for a variety of doors, with non-standard sizes available upon request.
- Installed in schools, nurseries, leisure centres, retail environments and restaurants.

SPECIFICATION

- Free standard 2 Year Warranty.
- Standard length 1960mm (non-standard sizes available on request).
- UL 4hr Fire Rated.
- Easy to Install.
- Durable and easy to maintain.
