

BOSE F1 Model 812 Flexible Array Loudspeaker

Powered 230V EU

DESCRIPTION

Powerful, standalone sound that flexes to meet your coverage needs. The Bose F1 Model 812 is a 1000-watt, full-range loudspeaker featuring Bose Flexible Array technology. At the heart of the F1 is a 30 cm woofer nested behind an array of 8 high-output drivers. These 9 speakers are supported by a lower crossover point than conventional loudspeakers to deliver clearer, more natural vocals and midrange clarity, even at high volumes. And you control the vertical coverage pattern. So, wherever you're playing, you can adapt the PA to match the room.

Engineered with a flexible array of eight high-output mid/high drivers, a high-powered 30.48 cm woofer, a lower crossover point and 1,000-watt amplifier, the loudspeaker delivers high SPL performance while maintaining vocal and midrange clarity that's dramatically better than conventional loudspeakers.

The eight drivers on the F1 Model 812 Flexible Array loudspeaker are mounted on a specially designed flexible baffle. Simply push or pull the array into position to create four vertical coverage patterns: Straight, J, Reverse J or C. Once set, the system automatically changes the EQ to maintain optimum tonal balance for each unique coverage pattern.

When you need more powerful bass, simply add the Bose F1 Subwoofer. It packs all the power of a larger bass box into a more compact design that's easier to carry and fits in a car. A mounting stand for the loudspeaker is integrated right into the body of the subwoofer, so you always know where it is, making setup fast and easy. The stand even includes cable channels to neatly hide the wires.

The loudspeaker and subwoofer each have 1,000 watts of power, so you can fill nearly any venue with sound.

Easy travel

And now getting there is easier, too. The loudspeaker and subwoofer feature strategically placed handles for easy transport and highly durable, lightweight composite enclosures to ensure easy transport.

Superior, consistent performance

Delivers high SPL performance while maintaining vocal and midrange clarity that's dramatically better.

Getting there is easier, too

The loudspeaker and subwoofer feature strategically placed handles and lightweight, composite enclosures.

TECHNICAL CHARACTERISTICS

Brand : BOSE
Part number : 731419-2110
Audio output channels : 1.0 channels
Connectivity technology : Wired
Depth : 372.5 mm
Frequency range : 43 - 20000 Hz
Height : 664.7 mm
Manual : Yes
Number of drivers : 8
Number of speakers : 9
Product colour : Black
Quantity per pack : 1 pc(s)
Recommended usage : Universal
RMS rated power : 1000 W
Sensitivity : 132 dB
Speaker placement : Floor, Tabletop/bookshelf
Weight : 20.2 kg
Width : 334.3 mm
