

DESCRIPTION

The PLANET GS-4210-8P2S managed switch has 8 Gigabit RJ-45 ports with PoE+ function, supplying up to 36W per port, and 2 SFP optical ports capable of building up 100FX / Gigabit long-distance connections, depending on the SFP module.

In addition to layer 2 management functions, the PoE+ switch supports the Watchdog function, so that the connected devices can be tested and automatically reset, in case of a failure or if they don't acknowledge the ping request sent by the switch.

Thanks to this implementation, there is no need to send a technician on the field to switch on/off a camera or reboot a disabled Wi-Fi hot-spot.

The PLANET GS-4210-8P2S switch supports a scheduling program to manage the PoE budget. For example, you can power off IP and Wi-Fi hot-spots during the night to increase the security of your data, while saving more resources for the CCTV system.

Product benefits:

- High-power PoE+ ports: 36W
- Layer 2 functions: VLAN, QoS, IGMP...
- Watchdog
- Embedded scheduling program
- 2 x Dual Speed fiber optic ports compatible with most 100FX/ Gigabit SFP modules

TECHNICAL CHARACTERISTICS

Brand : PLANET

Part number : GS-4210-8P2S
