

## Guided drives DFM/DFM-B

# FESTO

Festo Core Range  
Solves the majority of your automation tasks

Worldwide: Quickest delivery – wherever, whenever  
Simply good: Expected high Festo quality  
Fast: Easy and fast to select

With the Festo Core Range, we have selected the most important products and functions from our broad product catalogue, and added the quickest delivery.

The Core Range offers you the best value for your automation tasks.

Just look  
for the  
star!

## Characteristics

### At a glance

Drive and guide unit in a single housing

Sturdy and precise

High resistance to torques and transverse loads

- Minimal space requirement
- Minimal mounting time
- Choice of compressed air supply ports
- Wide range of mounting options
- Good protection against torsion
- High rigidity
- Maintenance-free
- With plain-bearing guide: high rigidity thanks to large-diameter guide rods and four plain-bearing bushes
- With recirculating ball bearing guide: for applications involving torque loads

### Wide choice of variants

Guided drive DFM

- Basic drive with strokes of up to 200 mm

Guided drive DFM-B

- Drive with strokes of up to 400 mm
- With precision adjustment of end positions
- With pneumatic cushioning, adjustable PPV
- With shock absorber, self-adjusting, progressive

### Application examples

#### Clamping

The guided drive is perfectly suited to clamping components for reliable further processing.

#### Lifting

The guided drive effortlessly transports and lifts loads of over 200 kg, powerfully and dynamically.

#### Stopping

Loads of up to 150 kg are stopped reliably and safely, making the guided drive a resilient and sturdy stopper cylinder.

## Characteristics

### Use in conveyor systems

#### Lifting

#### Pushing

#### Stopping

#### Stopping via stop bracket

It is recommended to fit a buffer on the workpiece carrier.

### Mounting options

#### Flat from above

#### Flat from underneath

#### On the side from underneath

#### On the end face

### For manufacturing lithium-ion batteries

#### DFM-...-F1A

Recommended for production plants for manufacturing lithium-ion batteries (Cu<=1%, Zn<=1%, Ni<=1%).

Metals with copper, zinc or nickel as the main constituent are excluded from use.

Exceptions are nickel in steels, chemically nickel-plated surfaces, printed circuit boards, cables, electrical plug connectors and coils.

#### Accessories

Your Festo contact partner can provide information about which accessories are suitable for manufacturing lithium-ion batteries.

## Peripherals overview

Piston diameter 6, 10

Accessories	Description	→ Page/Internet
[1] Guided drive DFM	Guided drive, basic design	9
[2] Proximity switch SMT-10G	Insertable in the slot lengthwise	72
[3] One-way flow control valve GRLA	For speed regulation	74
[4] Push-in fitting QSM/QS	For connecting compressed air tubing with standard O.D.	qs

**Note**  
 Only the following push-in fitting/  
 one-way flow control valve may be  
 used in combination with proximity  
 switch SMT-10G:

- QSM-M3-2-I
- GRLA-M3

**Note**  
 Observe the mounting position of the  
 proximity switch SMT-10G  
 → user documentation

### Extremely functional

Direction of movement

Excellent protection against torsion, high resistance to torques and transverse loads

## Peripherals overview

Piston diameter 12 ... 100

Accessories		Description	→ Page/Internet
[1]	Guided drive DFM	Guided drive, basic design	9
[2]	Slot cover ABP-5-S	For protecting the sensor cable and the sensor slots from contamination	74
[3]	Proximity switch SME-/SMT-8	Can be integrated in the profile barrel	73
[4]	One-way flow control valve GRLA	For speed regulation	74
[5]	Push-in fitting QSM/QS	For connecting compressed air tubing with standard O.D.	qs
-	Centring sleeves ZBH	4 or 6 pieces included in the scope of delivery	72
-	Adapter	For drive/drive connections	75
		For drive/gripper connections	grippers

### Extremely functional

Direction of movement

Excellent protection against torsion, high resistance to torques and transverse loads

### Deflection of end plate

$$f = f_1 + f_2$$

$f$  = total deflection of end plate

$f_1$  = deflection due to average bearing clearance (GF)/bearing clearance (KF)

Bearing clearance GF with production tolerance ±0.01 mm

Bearing clearance KF determined through series of tests

$f_2$  = deflection due to transverse load

### Deflection $f_1$ due to bearing clearance as a function of stroke $l$ (with no load)

1 bearing per guide rod

- GF: DFM-6/10 All strokes
- DFM-1 6/20 Stroke ≤ 30 mm
- KF: DFM-1 2/16/20 Stroke ≤ 30 mm

- Plain-bearing guide GF (average deflection  $f_1$ ) for diam. 6/10
- Plain-bearing guide GF (average deflection  $f_1$ ) for diam. 12 ... 100
- - - Recirculating ball bearing guide KF

2 bearings per guide rod

- GF: DFM-12 Stroke ≤ 30 mm
- GF+KF: DFM-1 2/16/20 Stroke ≥ 40 mm
- DFM-25 ... 100 All strokes

- Plain-bearing guide GF (average deflection  $f_1$ )
- - - Recirculating ball bearing guide KF

## Data sheet

### Use as a stopper cylinder

When used as a stopper cylinder, only guided drives with plain-bearing guide DFM-...-GF may be used.

In addition, the distance  $l_{max}$  (→ drawing) must not be exceeded.

The permissible kinetic impact energy at the end stop must also not be exceeded.

$$l_{max} = \text{stroke } l + \text{height of stop bracket } L$$

$$l_{max} = 50 \text{ mm}$$

### Impact mass m as a function of the impact velocity v

#### DFM-12 ... 25-GF, stroke < 30 mm

- DFM-12
- · - · - · DFM-16
- - - - DFM-20
- · · · · DFM-25

The values in the above graph are based on the assumption that the workpiece carrier is fitted with a flexible buffer with deformation of 1 mm. Only guided drives with a plain-bearing guide GF < 30 mm stroke may be used.

#### DFM-32 ... 100-GF, stroke < 50 mm

- DFM-32
- · - · - · DFM-40
- - - - DFM-50
- · · · · DFM-63
- · - · - · DFM-80
- - - - DFM-100

The values in the above graph are based on the assumption that the workpiece carrier is fitted with a flexible buffer with deformation of 2 mm. Only guided drives with a plain-bearing guide GF < 50 mm stroke may be used.

## Data sheet

### Characteristic load values for recirculating ball bearing guide KF

The indicated forces and torques refer to the guide centre.

If the guided drive is simultaneously subjected to several of the indicated forces and torques, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

## Data sheet

### Calculation of the service life for recirculating ball bearing guide KF

The service life of the guide depends on the load. To provide a rough indication of the service life of the guide, the graph below plots the load comparison factor  $f_v$  against the service life ratio  $q$ .

These values are only theoretical. You must consult your local contact person at Festo for load comparison factors  $f_v$  greater than 1.5.

#### Load comparison factor $f_v$ as a function of service life ratio $q$

Example: The effect on the service life, deviating from the specified reference service life, can be determined by the service life ratio  $q$ :

Given:

Reference service life = 10000 km

Required service life = 3000 km

$$q = \frac{3000 \text{ km}}{10000 \text{ km}} = 0.3$$

The graph gives a load comparison factor  $f_v$  of 1.5. This means that the permissible total load can be utilised up to 150%.

**Note**  
Engineering tool

→ [www.festo.com/engineeringtools](http://www.festo.com/engineeringtools)

$f_v > 1.5$  are only theoretical comparison values.

### Calculation example

- L1 = centre of gravity of the moving mass of the guided drive
- L2 = centre of gravity of payload
- L3 = centre of gravity of the entire moving mass

Length measurements should be provided with plus/minus signs as shown in the figure:

- L3 > 0 = centre of gravity of the moving mass is on the payload side
- L3 < 0 = centre of gravity of the moving mass is on the guide side
- L4 = load side
- L5 = guide side

Given:

- Guided drive: DFM-32-80-KF
- Stroke length:  $H = 80 \text{ mm}$
- Centre of gravity of payload:  $L_{\text{Load}} = 35 \text{ mm}$
- Payload:  $m_{\text{Load}} = 10 \text{ kg}$
- Acceleration:  $a_x = 2 \text{ m/s}^2, a_y = a_z = 0 \text{ m/s}^2$

To be calculated:

- Loads  $F_{y_{\text{dyn}}}/F_{z_{\text{dyn}}}$  and  $M_{x_{\text{dyn}}}/M_{y_{\text{dyn}}}/M_{z_{\text{dyn}}}$
- Verification of operation with combined load
- Expected service life

## Data sheet

## Calculation example

Solution:

Moving mass:

 $m_b$  = moving mass of guided drive $m_{Load}$  = payload

$$m_{b\_total} = m_b + m_{Load}$$

From table → page 11

$$m_b = 1.173 \text{ kg}$$

$$m_{b\_total} = 1.173 \text{ kg} + 10 \text{ kg} = 11.173 \text{ kg}$$

## Centre of gravity of the moving mass

$$L_{b\_ges} = \frac{L_1 \cdot m_1 + L_b \cdot m_b}{m_{b\_ges}}$$

 $L_b$  = centre of gravity of the moving mass of the guided drive $m_b$  = moving mass of guided drive $L_{Load}$  = centre of gravity of payload $m_{Load}$  = payload

From table → page 11

$$L_b = 54.7 \text{ mm}$$

$$L_{b\_ges} = \frac{(+35 \text{ mm}) \cdot 10 \text{ kg} + (-54.7 \text{ mm}) \cdot 1.173 \text{ kg}}{11.173 \text{ kg}} = 25.6 \text{ mm}$$

Length measurements should be provided with plus/minus signs as shown in the figure:

 $L_{b\_total} > 0$  = centre of gravity of the moving mass is on the payload side $L_{b\_total} < 0$  = centre of gravity of the moving mass is on the guide sideLoads  $F_{y\_dyn}/F_{z\_dyn}$  and  $M_{x\_dyn}/M_{y\_dyn}/M_{z\_dyn}$ 

$$F_{y\_dyn} = m_{b\_total} \times a_y = 11.173 \text{ kg} \times 0 \text{ m/s}^2 = 0 \text{ N}$$

$$F_{z\_dyn} = m_{b\_total} \times (g + a_z) = 11.173 \text{ kg} \times (9.81 \text{ m/s}^2 + 0 \text{ m/s}^2) = 110 \text{ N}$$

From table → page 20

$$\text{Dimension X} = 56.5 \text{ mm}$$

$$M_{y\_dyn} = F_{z\_dyn} \times (\text{dimension X} + \text{stroke} + L_{b\_total}) = 110 \text{ N} \times (56.5 \text{ mm} + 80 \text{ mm} + 25.6 \text{ mm}) = 17.8 \text{ Nm}$$

$$M_{z\_dyn} = F_{y\_dyn} \times (\text{dimension X} + \text{stroke} + L_{b\_total}) = 0 \text{ N} \times (56.5 \text{ mm} + 80 \text{ mm} + 25.6 \text{ mm}) = 0 \text{ Nm}$$

## Verification of operation with combined load

Max. values from table → page 21

$$F_{y\_max} = 1130 \text{ N}$$

$$F_{z\_max} = 1130 \text{ N}$$

$$M_{x\_max} = 44.09 \text{ Nm}$$

$$M_{y\_max} = 28.83 \text{ Nm}$$

$$M_{z\_max} = 28.83 \text{ Nm}$$

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

$$f_v = \frac{0 \text{ N}}{1130 \text{ N}} + \frac{110 \text{ N}}{1130 \text{ N}} + \frac{0 \text{ Nm}}{44.09 \text{ Nm}} + \frac{17.8 \text{ Nm}}{28.83 \text{ Nm}} + \frac{0 \text{ Nm}}{28.83 \text{ Nm}} = 0.72 \leq 1$$

## Expected service life

 $L_1$  = reference service life

$$L = \frac{L_1}{f_v^3} = \frac{10000 \text{ km}}{0.72^3} = 27000 \text{ km}$$

Diameter 12 ... 16 mm

- [1] Mounting slot for proximity switches SME/SMT-8
- [2] Compressed air supply port optionally at the side or on top
- [3] Mounting thread
- [5] Tolerance between the centring holes ± 0.02 mm

 Note

If the guide rods project beyond the contour of the housing in the retracted end position (→ dimension L7), an appropriate recess must be provided in the mounting surface when the unit is mounted on its end face so that the guide rods can move freely.

Peripherals overview

DFM-B-12-P

DFM-B-12-P-AJ

 **Note**  
Proximity switches SM...O-8E cannot be used with the DFM-B.

## Peripherals overview

Accessories		Description	→ Page/Internet
[1]	Push-in fitting QS	For connecting compressed air tubing with standard O.D.	qs
[2]	Proximity switches SME-/SMT-8/10	Can be integrated in the profile barrel	73
[3]	Slot cover ABP-5-S	For protecting the sensor cable and the sensor slots from contamination	74
[4]	One-way flow control valve GRLA	For speed regulation	74
-	Centring sleeves ZBH	4 or 6 pieces included in the scope of delivery	72

### Variants

## Data sheet

Function

- $\varnothing$  - Diameter  
12 ... 63 mm
- $l$  - Stroke length  
10 ... 400 mm

$$v = \sqrt{\frac{2 \cdot E}{m_1 + m_2}}$$

$$m_2 = \frac{2 \cdot E}{v^2} - m_1$$

General technical data								
Piston diameter	12	16	20	25	32	40	50	63
Pneumatic connection	M5	M5	M5	G1/8	G1/8	G1/8	G1/4	G1/4
Design	Piston							
	Piston rod							
	Guide rods with yoke							
Cushioning								
DFM-...-P	Elastic cushioning rings/plates at both ends							
DFM-...-PPV	-		Pneumatic cushioning, adjustable at both ends					
DFM-...-YSRW	-		Self-adjusting at both ends					
Cushioning length

### Note

If the guide rods project beyond the contour of the housing in the retracted end position (→ dimension L7), an appropriate recess must be provided in the mounting surface when the unit is mounted on its end face so that the guide rods can move freely.

When using a variable stroke, the dimensions L1, L2, L7, L9 and L11 correspond to the next longest standard stroke.

## Accessories

### Adapter kit DHAA, HAPB

Material:  
Wrought aluminium alloy  
Free of copper and PTFE  
RoHS-compliant

 **Note**

The kit includes the individual mounting interface as well as the necessary mounting material.

Permissible drive/drive combinations with adapter kit						Download CAD data → <a href="http://www.festo.com">www.festo.com</a>

1) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.
