

Horizontal Latch Clamps, Flanged Base

Features:

These latch clamps have a horizontal configuration with the clamp and latch bracket in the same plane, and are fitted with PVC handle grips.

Specification:

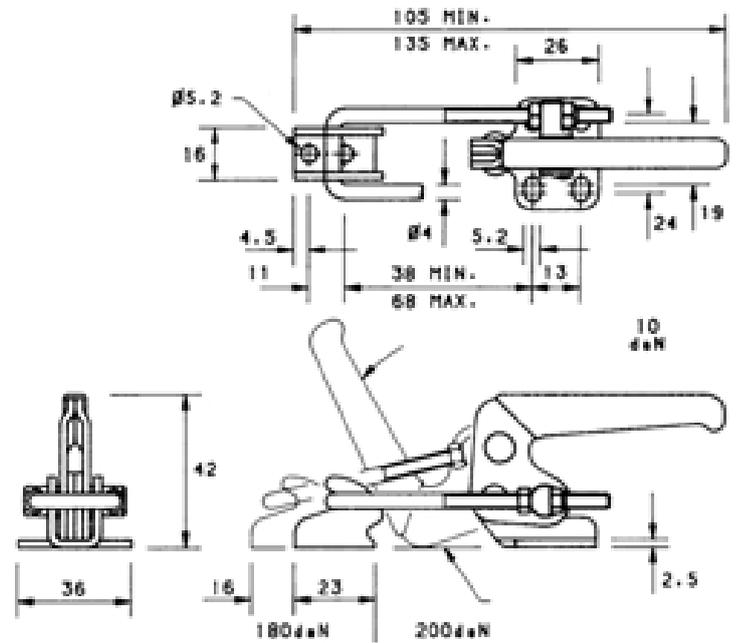

The components are of zinc plated and passivated steel, the rivet being of stainless steel and rotating in the close-toleranced hole of hardened parts or in hardened bushes. The handle and the trunnion which holds the U bolt are also hardened to resist wear.

Installation:

Horizontal clamps should be in alignment when viewed from both the top and the side to ensure that the clamp locks over centre correctly. The U bolt should be adjusted to ensure an equal pull on either side.

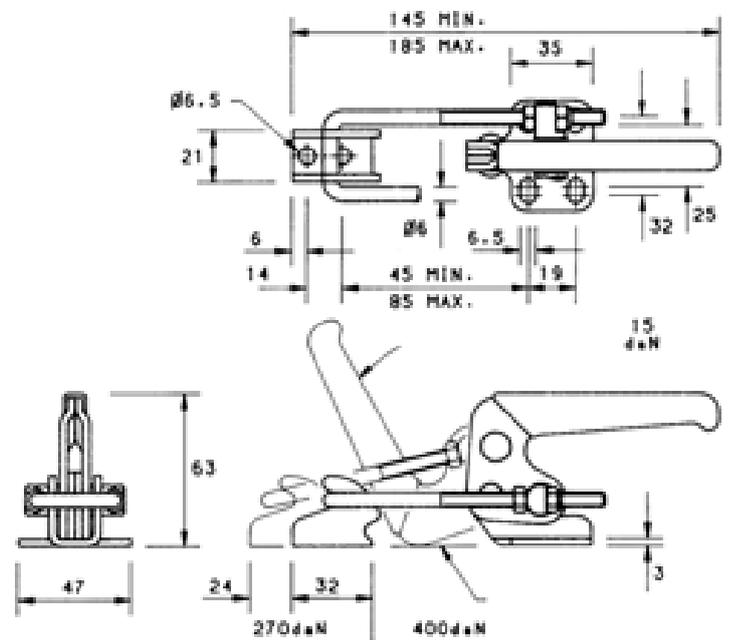

BR-LU200H

- Nominal holding force: 200 daN
- Weight: 0.05kg
- Supplied complete with: latch bracket as shown

BR-LU400H

- Nominal holding force: 400 daN
- Weight: 0.25kg
- Supplied complete with: latch bracket as shown

BR-LU700H

- Nominal holding force: 700 daN
- Weight: 0.70kg
- Supplied complete with: latch bracket as shown
