

Performance

Viscosity	100 cP		200 cP		300 cP	
Max. Flow	7 gpm 27 lpm		5 gpm	19 lpm	3.7 gpm	14 lpm
Max. Head	16 feet (4.9 m)					

Note: All testing was performed with water at 68°F. Actual performance can vary by +/- 10%. Actual performance will decrease with increased fluid viscosity and specific gravity. Viscosity and performance are based on electric motor at high speed.

Note: When pumping flammables or combustibles, use an air motor on a stainless steel tube with a static protection kit.

*An air motor is a non-electrical device, which means the possibility of explosion from igniting flammables or combustibles is reduced. Air motor performance will depend upon user's compressor and system set up.

Medium performance, light viscosity sealless drum/barrel pumps for container-to-container transfer of acids, corrosives and chemicals.
