

BEL 505S

Small Case Semi-Automatic Case Former / Packing Station

The BEL 505S folds the bottom flaps of RSC case blanks opened and presented down into it by an operator and then firmly holds the case ready for packing. It handles a smaller case size range than a standard BEL 505 and is more compact in size. As the filled [or empty] case is pushed out of the 505S into an adjacent case sealer, it resets itself automatically ready to receive the next case blank. The BEL 505S is entirely pneumatically operated and requires only compressed air at 80-90 psi. / 6 Bar.

STANDARD SPECIFICATIONS

		<u>Length</u>	<u>Width</u>	<u>Height</u>
