

Plate for electronic touch mechanisms with blue light indicator graphite Simon 88

REF. 88034-38

BASIC INFORMATION

DESCRIPTION

Are you looking to save on your electricity bills? Simon's commitment to efficient consumption is clear with its lighting adjustment features. They are designed to be able to adapt to any room to the desired ambience taking into account the intensity of ambient light. Thanks to these applications, energy-saving is substantial because we will be able to save costs by up to 10% thanks to the daytime and night-time lighting control. The saving is more notable when we adapt the light intensity to save a 20% in our electricity consumption. To install a regulator with a timer for tactile mechanisms of the Simon 88 series we'll need this plate for touch electronic devices with blue light graphite. Manufactured in thermostable with a graphite finish, this piece is an individual version, for 1 element with dimensions of 68.3 millimetres. Simon 88 opts for circular forms, creating a series that breaks with conventional shapes.
