

RF receiver mechanism for blinds

REF. 75886-39

BASIC INFORMATION

DESCRIPTION

Technology is part of our day-to-day life in any of the functions we perform. The latest innovations have been incorporated into our way of communicating, our methods for carrying out a job or in the way we enjoy our leisure. The technology has also reached the mechanisms that make up the different elements of our homes and companies. For example in the new shutter systems, such as the radio frequency receiver mechanism for wireless shutters of the Simon 82 series, this device allows you to control blinds is individual and / or centralized command from one to fifteen emitting points and, most importantly, without the need of cabling. It also uses the latest technology (interface 868 Mhz) ensuring reliability, good operation and excellent reception level, without interference when passing the signal through the walls. All with the best value for money, a feature that is the hallmark of all products included in the wide range of Simon.
