

Plate for electronic touch mechanisms with blue light grey Simon 75

REF. 75034-35

BASIC INFORMATION

DESCRIPTION

To be able to regulate the intensity of electrical and electronic systems in a comfortable way is one of the great advantages of the mechanisms that include simple control over their operation. With this function, the users who have opted for it create the necessary environmental conditions for each moment, which translates into energy and economic savings in companies and private homes very important. The Plate for the touch electronic devices with blue light in grey of the Simon 75 series was created to achieve this goal. It is a piece made of thermoplastic components, which provide great resistance and durability. It is also suitable for surface and flush mounting, being available in six finishes. The ease with which it can be cleaned allows it to avoid the oxidation typical of the high temperatures that sometimes occur in the rooms where they are installed.
