

Plate for electronic mechanisms aluminium Simon 75

REF. 75080-33

BASIC INFORMATION

DESCRIPTION

Electronic mechanisms usually have very sensitive systems. This circumstance means that their protection must be taken into account. For this purpose, we have the Plate for electronic mechanisms in aluminium of the Simon 75 series, which stands out for its innovative design like the rest of the products in this range. It is available in six finishes, which allows you to choose the frame with the same baseboard colour as the selected rocker. It is a perfect piece to easily install on the surface-mounted or recess in a wall in the most comfortable and simple way. The resistance to adverse weather conditions, as well as to knocks is another of its main features. This is a plate whose structure has been developed with top quality thermoplastic materials, which translates into a long life span for many years, so we are one of the most complete plates.
