

# WORLD LEADER IN AIR COOLING

Cooling The World Since 1939

## EVAPORATIVE AIR COOLING.

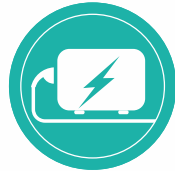

Evaporative air cooling is the most efficient and environment-friendly cooling technology which works on the principle of heat absorption by water evaporation.

- A pump circulates water from the tank on to a cooling pad making it wet.
- A fan/blower draws hot air from outside the unit and forces it through the moistened pad.
- As the air passes through the wet pad it gets cooled by evaporation.
- The blower and motor are designed to deliver the appropriate airflow.

## BENEFITS OF SYMPHONY AIR COOLERS.

Runs on operating cost of a fan.

Also works on inverter power.

Use it inside, use it outside.

Delivers fresh, filtered cool air.

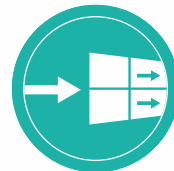

## COOLING TIPS.

Switch on to 'cooling mode'.

Ensure sufficient water in the tank.

Keep window/door open for cross ventilation.

Replace the cooling pads annually.

# MULTISTAGE AIR PURIFICATION\*

Symphony coolers come with i-Pure, a multistage filtration system that cleans a spectrum of airborne pollutants and harmful micro-organisms. Each of the filters has a specific function and is powered with a specific technology that removes the impurities from the incoming air.

## Allergy Filter

This allergy filter attracts and reacts with various allergy inducing agents - allergens - and deactivates them.

## Bacteria Filter

This is an antibacterial filter made of carbon fabric, and treated with special anti-microbial chemicals that arrest and destroy the harmful bacteria and various micro-organisms.

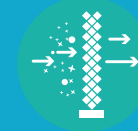

## Smell Filter

Smell filter effectively adsorbs odours, smoke, chemicals, fumes and various volatile organic compounds from the indoor air, including life-threatening chemicals like carcinogenic elements.

## PM2.5 Wash Filter

The air is washed and cleansed while passing through this special cellulose based filter with flowing water curtain. Here, the air is stripped of PM2.5 pollutants and what remains is pure and crisp air.

## Dust Filter

Dust filter makes the air healthy by eliminating micro-particles such as pollen, dead skins, dust mites, pet dander, mold spores, etc.
