5) Place the toilet according to the marks .

6) Put the connector onto the toilet outlet aiming to the drainpipe, and make sure the screw hole aim at the plastic holder.

7) Fix and tighten the screw, cover the screw cap.

8) Connect the inlet valve with soft pipe and multivalve.
NOTE: When the water pressure on high level ,please use alu-plastic pipe.

1、PREINSTALLATION

1. In order to get installation easily, please read this instruction carefully before and follow it ,which can avoid unnecessary loss.
2. According to the component list, please check the toilet and all the components available ,prepare the tools for installation.
3. when local water pressure is over 0.4MPa, better change alu-plastic pipe from the usual inlet pipe.
4. Do not use concrete to fix the toilet, as it makes the toilet split easily.
5. Better usage after sealed silica gel dried (more than 24 hours)
6. Watertank fittings have been professionally adjusted ,any adjustment is not available in case of affecting normal function.

2、TOOLS

3、COMPONENTS
