

Important Technical Data

Minimum operating pressure (Basin) 0.75 bar
Minimum operating pressure (Bath) 1.75 bar

Maximum operating pressure 5.0 bar*

Maximum hot water temperature 70°C*
Recommended hot water temperature 46°C

Note: If these temperatures or pressures are exceeded, even for short periods, damage can result. In these instances a thermostatic mixing or pressure reducing valve should be installed.

For manual mixing products we recommend the installation of a separate TMV2 product to reduce the risk of accidental scalding.

All thermostatic products should be tested and cleaned at least once a year.

Hot and cold supply pressures should be as closely balanced as possible for best results. Supply pipes should maintain the maximum diameter until immediately before the fitting. The differential between the hot and cold water supply temperatures should be sufficient to allow correct mixing function.

All Abode taps are either WRAS approved or manufactured in accordance with recognised European standards. Please ensure that your Abode product is fitted in accordance with Local Water Byelaws.

Where hot and cold water mix within any product, then suitable non return valves should be installed to the hot and cold supplies to prevent backflow.

Whilst assembling this product take care not to accidentally loosen any screwed assemblies. PTFE tape can be used to ensure watertight joins on threaded connections, do not over tighten connections or allow pipes to be twisted or folded.

The installation should be periodically checked for damage, if the property is left unattended for a prolonged period we recommend isolating water supplies.

Abode is a registered trademark of Abode Home Products Limited. All errors and omissions excepted.

Wall Mounted Basin/Bath Mixer

5 Year warranty Terms and Conditions

In the unlikely event that you should experience any defect in the materials or workmanship of your new Abode tap within FIVE years of purchase, the purchaser's sole remedy shall be the replacement (at the manufacturer's discretion) of all or any part of the product that is defective. All working parts and valves are guaranteed for a period of FIVE years from purchase. Decorative surface finishes and O-rings are guaranteed for ONE year from the date of purchase provided that our advice concerning care has been observed and no scouring agents have been used.

This is provided that the tap has been used for normal domestic purposes in the UK and that the care, installation and maintenance instructions have been observed. The warranty extends to the original purchaser only. You should retain a copy of your dated invoice as proof of purchase to validate any claims under this guarantee.

Marks, scuffs and scratches caused by improper installation or accidental damage are not covered by this guarantee. Neither are shade variations or any

damage or defect caused by incorrect installation or abuse of the fitting.

As we are continuously improving and developing our range of products, finishes & colours, in the event of a valid claim, we may not be able to provide an identical replacement for the defective product throughout the guarantee period. Where an identical product is no longer available, we will supply the nearest equivalent from our then current product range. In assessing your claim, we must be given the opportunity to inspect the product as installed prior to removal. Any product returns must be packaged as received and complete.

No other warranties, express or implied, are made, including merchantability or fitness for a particular purpose. Under no circumstances shall the manufacturer be liable for any loss or damage arising from the purchase, use or inability to use this product, or for any special, indirect, incidental or consequential damages. No liability is accepted for consequential damage to other household fixtures, fittings or furnishings arising from this claim, even if attached to the product. No installer, dealer, agent or employee of Abode Home Products Limited has the authority to modify the obligations or limitations of this warranty.

Care Instructions for your Basin/Bath Mixer

To maintain the appearance of this tap, ensure that it is regularly cleaned only using a clean, soft damp cloth. A solution of warm water and a mild liquid detergent may be used where necessary, and then the fitting rinsed thoroughly and wiped dry. Any other cleaning action or cleaning products will invalidate your warranty. If the product has a removable spout diffuser it can be unscrewed and cleaned periodically in warm water to maintain flow.

Abrasive cleaners, scouring cleaners, limescale cleaners and acidic cleaners must not be used under any circumstances. Avoid contact with all solvents (including chlorinated solvents, ketones or acetones as these may result in surface deterioration or etching). Also avoid contact with any harsh household chemicals such as bleach cleaners, drain cleaners, rust removers, paint strippers and toilet bowl cleaners, toothpaste, mouthwash, bar keepers friend or Brasso.

Please leave these instructions for your customer.

Preparation

All parts should be removed from their packaging and inspected for any transport damage and completeness prior to installation; you should read these instructions throughout before commencing installation.
We do not accept responsibility for problems that may occur through improper installation. Always ensure you have sufficient hot and cold water pressure available to allow correct function before specifying or installing this product.

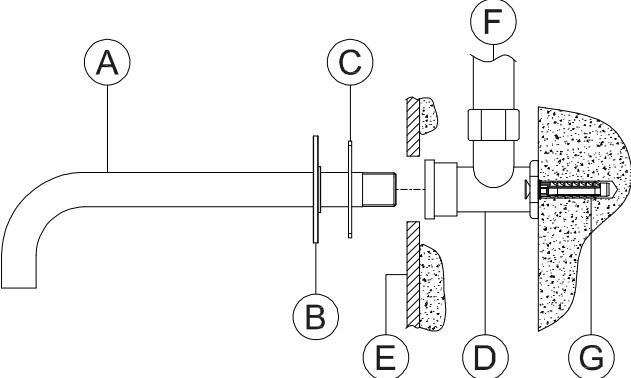

Before installing the new mixer it is essential that you thoroughly flush through the supply pipes in order to remove any remaining solder, swarf or impurities from your system. Failure to carry out this simple procedure could cause problems or damage to the workings of the product.

We strongly recommend installing particle filters and isolation valves to both the hot and cold feed pipes in an accessible position. This will help to prevent premature failure of the valves and ease any future maintenance.

All serviceable parts should be given suitable access to allow easy future maintenance.

Shut off your water heating system and ensure that your mains stopcock is closed. Ensure both the hot and cold water supplies are isolated before commencing installation.

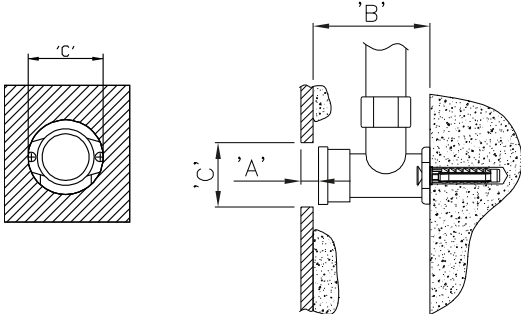

Installation - Spout

The diagram illustrates the installation of the spout. It shows a side view of the spout assembly. A horizontal pipe (F) enters from the right, passes through a wall (E), and connects to a 90-degree elbow (D). The elbow connects to a vertical pipe (A) that extends upwards. A back plate (B) is mounted on the wall behind the elbow. A foam seal (C) is placed between the back plate and the wall. The spout (A) is shown with a curved end. The wall (E) is shown with a textured surface. The spout (A) is shown with a curved end. The back plate (B) is shown with a textured surface. The foam seal (C) is shown with a textured surface. The elbow (D) is shown with a textured surface. The rigid inlet pipe (F) is shown with a textured surface. The wall fixings (G) are shown with a textured surface.

Key	Description	Qty.
A	Spout	1
B	Back plate	1
C	Foam seal	1
D	1/2" Female 90° backplate elbow	0
E	Finished wall surface	n/a
F	Rigid inlet pipe	0
G	Wall fixings	0

1. Open the wall / ceiling out to the required width and depth for supply pipe (F) and elbow (D).
- All serviceable parts should be given suitable access to allow easy future maintenance.
 - You should ensure that both the product and required fittings will fit into the depth and area of the mounting surface available before installation. Roughly assemble the product and plumbing connections to establish the required sizes 'A-C'.

The diagram shows the dimensions for the spout installation. Dimension 'A' is the distance from the finished surface to the fixed connector. Dimension 'B' is the cavity depth for supply pipes and fixings. Dimension 'C' is the finished hole diameter. The diagram shows a side view of the spout assembly with dimensions A, B, and C indicated. The spout (A) is shown with a curved end. The back plate (B) is shown with a textured surface. The foam seal (C) is shown with a textured surface. The elbow (D) is shown with a textured surface. The rigid inlet pipe (F) is shown with a textured surface. The wall fixings (G) are shown with a textured surface.

'A'	Distance from finished surface to fixed connector
'B'	Cavity depth for supply pipes and fixings
'C'	Finished hole diameter

2. Fix elbow (D) or inlet pipes (F) securely to the wall using appropriate fixings (G). Note these fixings should be secure enough to support the attached product weight (A) safely during use.
- Before installing this new connection, **it is essential that you thoroughly flush through the supply pipes** in order to remove any remaining solder, swarf or impurities from your system. Failure to carry out this simple procedure could cause problems or damage to the workings of any attached product and invalidate the warranty.
3. Make good the finished surface (E) using tiles or similar, now prepare hole 'C' in the tiles. Ensure back plate (B) will cover the finished hole diameter 'C'.
4. Insert foam seal (C) inside the back of back plate (B) as shown.
5. Once inserted slide back plate (B) over spout (A) as shown ensuring pre-inserted O-ring inside back plate (B) is in place.
6. Screw the spout (A) into the elbow (D) using PTFE tape or sealing compound to ensure a water tight connection. Test the water tightness of all inlet pipes and connections before progressing with the installation.
7. Watchfully Seal around the finished wall surface (E) and back plate (B) if applicable to prevent water ingress into the wall. Note take care not to apply sealant to sections of thread on the spout (A) that are required for fixing later.

Installation – Mixer Body

Key	Description	Qty.	Key	Description	Qty.
H	Back body	1	N	Dust cap	1
I	Plastic protection cover	1	O	Grub screw (2.5mm)	1
J	½”M x ½”M Connector (Basin) ½”M x ¾”M Connector (Bath)	0	P	Decorative cover	1
K	Foam seal	1	Q	Valve locking nut	1
L	Back plate	1	R	Single lever valve	1
M	Handle	1	S	Cache TT aerator	1

1. Decide on a suitable position for the mixer where all users can operate.
2. Determine the route for the incoming Hot (J1), Cold (J1) and Outlet (J3).

***Note: Connectors (J1, J2 & J3) are not included. The product can be fitted as both a basin mixer and a bath filler so the connectors should be chosen to suit this.**

3. Connect the hot and cold feeds to the chosen connectors (J1 & J2).
4. Connect outlet (J3) to spout supply (F)
5. Check the connections are water tight and then finish the tiling to the final aperture size.

***Note: Pipe clips should be fitted on all three control pipes (Hot, Cold and Outlet) to position and stabilise it.**

6. When the tiles have set, remove and discard the plastic protection cover (I).

7. Insert foam seal (K) inside the back of back plate (L).
8. Once inserted slide back plate (L) over decorative part of back body (H) as shown ensuring pre-inserted O-ring inside back plate (L) is in place.
9. Once in place fix handle (M) to the back body (H) by tightening grub screw (O).

After installation

Once you have visually checked the installation of the new tap and all connections, ensure that all other fittings are closed except the tap which should be left open.

Turn on your water heating system and ensure that your mains stopcock is open. Reconnect both the hot and cold water supplies to this fitting.

Check the function of flow and function of hot, cold and mixed water.

Turn off the tap and check carefully for any leaks around all connections on the fitting and adjoining plumbing. If possible return to the installation after a longer period to double check for slower leaks. If pressure testing equipment is available check the installation to the maximum recommended pressure.

Clean the tap to remove any marks created during installation as instructed then place a bag over the product to protect the tap until it is ready for use.

Maintenance

Valve replacement

1. First shut off the water supply to the mixer.
2. Remove dust cap (N) and remove handle (M) by loosening grub screw (O).
3. Unscrew decorative cover (P).
4. Unscrew valve locking nut (Q) using a spanner.
5. Remove the old cartridge (R).
6. Clean any debris from the chamber of the mixer body (H).
7. Locate the new valve (R) into the tap chamber (B1); ensure the pegs on the valve (R) align with the recess in the chamber of the mixer body (H).
8. Reassemble the handle assembly in the reverse order.

Cleaning the Aerator

1. Unscrew Aerator (S) from spout (A) using Cache TT aerator key that is provided.
2. Wash the aerator with clean warm running water, taking care not to lose the rubber washer.
3. Once the debris has been removed screw back onto spout (A) using the aerator key.
