GENERAL CHARACTERISTICS

Mechanical Flow Switch for liquids or gaseous media. A bellow-supported paddle activates an adjustable micro switch. Rugged design in brass or stainless steel.

- * operational range a diameter 25-200
- * good repeatability
- * low pressure loss

Male thread R1" brass/stainless steel

IMPORTANT FOR YOUR ORDER

- Please indicate flow direction, metering substance and adjustable range with your order.
- With viscous liquids please indicate viscosity, temperature and metering substance (adjustable range on request)

Adjustment instructions:

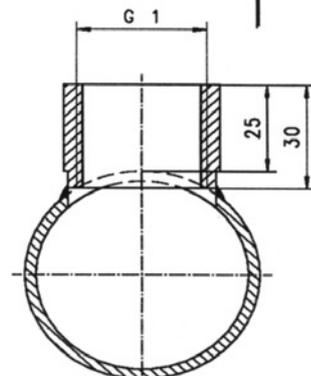

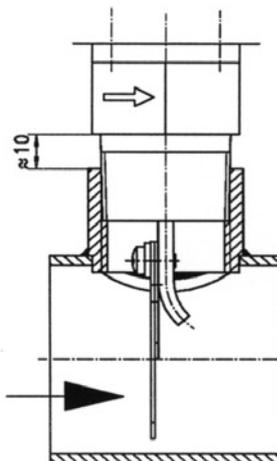

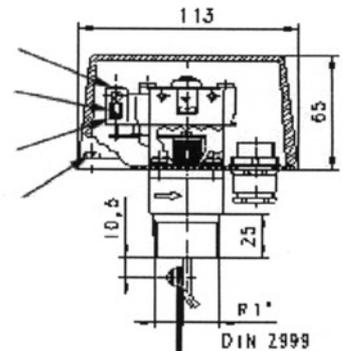

1) Always ensure that there is enough flow to operate the switch at the required set point, taking into account that the setting range given in the datasheets is for falling flow and that the hysteresis is 10%

2) Remove the 4 x cover retaining screws

3) Turn the adjustment screw clockwise to increase the falling flow rate set point and anti clockwise to decrease the falling flow rate set point.

N.B Special care must be taken to ensure that the set point indicator is never in the fully down position as this will cause the unit to be inoperative.
