#### Electrical details

Electrical input signal	2-pin versions: 4 to 20 mA or 1 to 10 V 3-pin versions require 12 to 24 V d.c. supply
Electrical power input	24 V d.c. ±10%
Failure mode	Output pressure falls to bleed pressure when electrical supply fails
Loop resistance	2-wire version: 350 Ω max

## Warning

These products are intended for use in industrial compressed air systems only. Do not use these products where pressures and temperatures can exceed those listed under »**Technical features**«.

Before using these products with fluids other than those specified, for non-industrial applications, life-support systems, or other applications not within published specifications, consult NORIGREN.

Through misuse, age, or malfunction, components used in fluid power systems can fail in various modes.

The system designer is warned to consider the failure modes of all component parts used in pneumatic systems and to provide adequate safeguards to prevent personal injury or damage to equipment in the event of such failure.

System designers must provide a warning to end users in the system instructional manual if protection against a failure mode cannot be adequately provided.

System designers and end users are cautioned to review specific warnings found in instruction sheets packed and shipped with these products.
