

FEATURES

Anti-Static

Arch Support

ESD Certified

PRODUCT DESCRIPTION

Activ-Step® Tri-Shift Footbeds deliver multi arch support for everyday, outdoor and performance footwear. With low, mid, and high arch options, each footbed matches the wearer's natural foot profile, supporting comfort, stability and load distribution.

PRODUCT FEATURES

A responsive gel heel pad provides instant under-heel comfort, compressing to cushion impact with every step before rebounding to its original shape. The moulded TPU stability shank adds midfoot structure and arch reinforcement, bridging the heel and forefoot for a smoother step.

Engineered multi-density foams balance firm support with soft cushioning underfoot. By blending shock-absorbing closed cell PU foam with a comfort foam and durable TPU support structure, the downward pressure is more evenly spread across the heel, midfoot and forefoot to reduce tired feet and fatigue through a long shift.

The high-abrasion top layer, made from 100% recycled polyester, gives soft comfort directly underfoot, while static dissipating stitching helps maintain compatibility with anti-static and ESD rated footwear where required.

ESD and Anti-static properties are void when used in conjunction with footwear conforming to ASTM F2413-24 Electrical Hazard Specification.
